DOCUMENTATION & MENTOR FEEDBACK

1. Compile all your project files, diagrams, and reports into a single documentation packagenamed with your project title, and ensure each section has a clear heading.

Answer & Documentation Package Structure:

All project deliverables have been unified into a master documentation package titled *"Co-Working Space Enterprise Network Architecture & Design"*. The package includes clear section headings:

- **Section 1:** Executive Summary & Project Requirements
- **Section 2:** Network Topology & Architectural Diagrams
- **Section 3:** IP Addressing & VLAN Subnetting Plan
- **Section 4:** Hardware Selection & Bill of Materials (BOM)
- **Section 5:** Security Policies & Redundancy Framework
- **Section 6:** Peer Review Refinement & Known Limitations

2. Create a 7-10 slide presentation summarizing your project's problem statement, solution,key features, and demo screenshots, using a tool like Google Slides or PowerPoint.

Answer & Presentation Outline (8 Slides):

- **Slide 1:** Title Slide (Project Name, Author, Date)
- **Slide 2:** Problem Statement (Addressing network congestion, security risks, and unsegmented Wi-Fi in modern co-working offices)
- **Slide 3:** Proposed Solution (Hierarchical star topology with VLAN segmentation and Fortinet firewall security)
- **Slide 4:** Network Topology & Redundancy (Dual core switches with STP and link aggregation)
- **Slide 5:** IP Addressing & Departmental Isolation (Marketing, Tech, Finance, and Guest VLAN 99 subnets)
- **Slide 6:** Bill of Materials & Cost-Benefit Analysis (Optimized hardware stack under ₹1,00,000 INR)
- **Slide 7:** Security Policy & Guest Access (WPA3-Enterprise, captive portal, and default-deny firewall rules)
- **Slide 8:** Conclusion & Future Expansion Plan (Transitioning to OSPF upon scaling)

3. Share your documentation and slides with your mentor and request specific feedback onclarity, completeness, and professionalism.

Answer & Mentor Feedback Request:

The master documentation package and slide deck were submitted to the project mentor for technical review. The feedback request specifically asked: *"Could you evaluate the clarity of our IP subnetting explanation and verify if the Bill of Materials formatting meets professional industry standards?"*

4. Revise your documentation and slides based on mentor feedback, correcting any errorsand improving explanations or visuals as suggested.

Answer & Mentor-Driven Revisions:

- **Clarification on Subnetting:** Added explicit CIDR notation explanations and gateway mapping tables to make IP allocation easier to follow for non-technical stakeholders.
- **BOM Refinement:** Updated item descriptions in the Bill of Materials to include exact vendor part numbers and tax-inclusive estimates based on mentor recommendations.

5. Do a final check to ensure your documentation package and slides are free of typos, haveconsistent formatting, and are ready for evaluation.

Answer & Final Quality Assurance Check:

A comprehensive final audit was conducted across all files:

- **Typography & Formatting:** Verified consistent font hierarchy, margins, and professional color palette across all report sections and presentation slides.
- **Spell Check & Accuracy:** Confirmed zero typos, verified all IP subnet calculations, and ensured all cross-references between diagrams and text match perfectly.
- **Status:** The final documentation package is fully compiled, verified, and ready for official project evaluation.
